(54) SOLAR BATTERY MODULE, METHOD OF MANUFACTURING THE SAME AND FRAME BODY THEREFOR

(57)Abstract:

PROBLEM TO BE SOLVED: To secure sufficient stop performance between a solar battery module body and a frame body, and to realize satisfactory stop workability on a solar battery module where the outer peripheral part of the solar battery module body is engaged with the frame body.

SOLUTION: A stop member 61 is previously arranged in a groove 54e formed in a frame member 54 constituting a frame body. When the outer peripheral part of the solar battery module body 4 is engaged with the groove 54e, the stop member 61 is deformed along the inner face of the groove 54e by pressure force operated from the solar battery module body 4, and the stop member 61 is compressed/deformed so that it is wound to the outer peripheral part of the solar battery module body 4.
